DATA ACQUISITION

During a Competition, cars may use data acquisition systems to monitor engine rpm, oil pressure, oil temperature, water temperature, fuel pressure and vehicle movement. Vehicle speed may be recorded by either GPS or the use of one wired wheel speed sensor providing it is not connected to any engine driven wheel.

No other form of driver/chassis data acquisition is permitted, including but not limited to any form of throttle, brake, steering, aerodynamic or suspension load potentiometers, at any time during a Competition

Cars should maintain period style dash and no form of instrumentation/display is permitted on the steering wheel.

Modern GPS Laptimer are allowed but not permitted to fix on the steering wheel

Part 3 Attachments/Drawings

TABLE OF DIMENSIONS AND TECHNICAL DRAWING FOR FORMULA 3 CARS FROM 1971 TO 1984 INCLUDED

1. DIMENSIONS AND AERODYNAMIC AIDS

1.1 All dimensions to be in accordance with the tables and technical drawings presented hereafter.

1.2 Specifically for ground effect cars built between 01.01.1981 and 31.12.1984 included, the addition of a flat bottom as per the following construction and fixation methodology is mandatory.

The valid year of specification as featured on the Historic Technical Passport first page will serve as reference.

Between the rear edge of the complete front wheels and the front edge of the complete rear wheels, all sprung parts of the car visible from directly beneath the car must lie on one plane within a tolerance of (+/-) 5mm.

Dimension « I » of the technical drawing hereafter.

All these parts must produce an uniform, solid, hard, rigid (no degree of freedom in relation to the body/chassis unit), impervious surface, under all circumstances. The periphery of the surface formed by these parts may be curved upwards with a maximum radius of 5cm - no diffuser are permitted.

Any specific part of the car influencing its aerodynamic performance:

- must comply with the rules relating to coachwork;
- must be rigidly secured to the entirely sprung part of the car (rigidly secured means not having any degree of freedom);
- must remain immobile in relation to the sprung part of the car.

Any device or construction that is designe to bridge the gap between the sprung part of the car and the ground is prohibited under all circumstances.

No part having an aerodynamic influence and no part of the coachwork may under any circumstances be located below the geometrical plane generated by the plane surface provided for by this article.
